Summary

Software Engineer (B.Sc. CS) with a backend focus, building end-to-end systems from infrastructure to production. Focused on scalable, reliable system design and engineering efficiency, working both independently and across engineering teams, with hands-on use of Cursor and Claude Code to design and build production systems end-to-end.

Skills & Languages

Technical Skills: Node.js, TypeScript, JavaScript, NestJS, Express, REST APIs, Socket.IO, PostgreSQL, Prisma, SQL, Redis, AWS, Docker, Kubernetes, CI/CD, Git, Angular.

AI Development Tools: Codex, Claude Code, GitHub Copilot.

Languages: Hebrew (Native), English (Fluent).

Professional Experience

NGSOFT | **Software Engineer** | 2025 – Present

- Developed end-to-end systems using NestJS on AWS and Kubernetes, exposing REST APIs and real-time Socket.IO channels backed by PostgreSQL, with a supporting Angular frontend.
- Architected a shared TypeScript library unifying logging and secure cross-network file exchange across multiple independent backend applications, establishing a consistent engineering standard where none existed.
- Redesigned data synchronization architecture from full to incremental sync, transferring only changed records with automated retries for unacknowledged records to ensure reliable delivery across isolated network environments.
- Built and maintained CI/CD pipelines for Docker-based deployments on Kubernetes, integrating database migrations through init containers.
- Authored AI agent instruction files (instruction.md, AGENT.md) defining coding standards and architectural context, improving LLM-generated code accuracy, streamlining code reviews, and accelerating onboarding for new engineers.

Education

The Open University of Israel | Bachelor of Science (B.Sc.) in Computer Science | 2022 – 2025

- Focused on software development, algorithms, data structures, and systems programming.
- Designed and implemented a 24-bit assembler in C, translating assembly code into machine code.

Military Service

Meitav Unit | **IT Systems Support Technician** | 2018 – 2020

- Provided technical support and maintained IT infrastructure and systems.
